Activity1:Interactiveandvisuallyappealingdashboards

Potential Outcomes from the Dashboard

1. Agricultural production is generally increasing
The year-wise graph shows an overall upward trend in agricultural production from 1997 to 2021, despite some fluctuations.
2. Kharif crops contribute the largest share
The seasonal distribution indicates that Kharif production is much higher than Rabi and Autumn, suggesting strong dependence on Kharif-season agriculture.
3. Production is concentrated in a few states
States such as Uttar Pradesh, Tamil Nadu, Karnataka, and Andhra Pradesh appear among the major contributors, indicating regional concentration of agricultural output.
4. Rice occupies the largest cultivated area
The crop-area comparison shows Rice having the largest cultivated area, followed by Wheat and Cotton, highlighting rice's major role in Indian agriculture.
5. Changes in cultivated area may affect future production
The state-wise cultivated-area comparison shows considerable differences between states. If cultivated areas decline in major producing regions, future agricultural production could face pressure, while better productivity could offset some of this effect.
