ProjectName	India'sAgriculturalCropProduction Analysis
MaximumMarks	5Marks

By using stories in Tableau, you can effectively communicate complex data in a way that is both interactive and engaging, making it easier for the audience to follow along and understand the insights. It's a tool for data storytelling, allowing you to present insights in a cohesive, engaging way that takes viewers through a logical progression of findings or analyses.

In Tableau, Story is a feature that allows you to create a sequence of dashboards, visualizations, and text to present data insights in a cohesive and narrative-driven way. It's like a slideshow within Tableau that guides the audience through a series of data points, helping them understand key insights, trends, or outcomes of your analysis.

Observations:

- *Area of each crop.
- *Leading area by crops.
- *Area of production.
- *Comparison of crops and area cultivated

Activity 2:

Publish Story on Tableau Public and Paste Public
